

*Ontario Chamber of Commerce
March Business of the Month
Lipari Web Design & PC Repair
353 Lake Road*

Jonathan Falanga owner of Lipari Web Design & PC Repair got his start in the computer business in 1992 when he convinced his father to convert from a completely paper chiropractic office to a computerized office. In 1992 this was a large complex and expensive undertaking. At the time Falanga's cousin did most of the work setting up the system and maintaining it. When Falanga's cousin stopped supporting the office systems, Falanga decided to provide the support services. Falanga had been watching his cousin and learning from him for several years. That was the beginning of Falanga's hardware, software, networking and general computer education. The ongoing education continues and Falanga is now certified by Microsoft in Windows Server 2003. The process of continuing education has allowed Falanga to offer more services to a wider range of people. Lipari Web Design was formed in 2003 and now offers services such as PC repair and virus removal along with web design. Working from home helps to keep the cost of these services low. Most request for services are to remove viruses.

Sometimes just going to a web site allows a virus to be transferred in spite of having anti-virus software. The anti-virus software assumes that by going to that website or clicking onto the link to that website you are authorizing the virus instructions to be downloaded to your computer. That is how anti-virus software is circumvented. Many times the first thing that the virus does is shut down the virus protection. There are some virus programs that try to gather data (browsing habits) so that they can send spam to your computer. Once they have your e-mail they can send all kinds of spam for any product. Some companies will sell e-mail addresses they have collected and this is another source of spam. A good resource for free anti-virus software is <http://www.filehippo.com/>

Falanga envisions a day when the average computer user will be able to stream music and video from the internet with out the choppiness we sometimes now experience. As technology improves we will not have the bandwidth limitations we have now. The upgrade of the current data transmission infrastructure to near light speed data transmission speeds will also help to eliminate bandwidth limitations.

Some good news regarding computer operating systems is that Falanga has not had any issues as a beta tester of Windows 7. Falanga has set up several systems with the new operating system and the process has gone very smoothly. Microsoft has allowed for compatibility of older software. Older hardware may not work on newer systems and it is up to the hardware manufacturer to update the software drivers. Although Windows 7 has good reviews it uses more processing power.
